Substituting type A precursor (allele 1) - Streptococcus pyogenes phage T12

NyAlternate names: erythrogenic toxin; scarlet fever toxin
Cippedies: Streptococcus pyogenes phage T12
Cipate: 10-Sep-1999 #sequence revision 10-Sep-1999 #text change 10-Sep-1999
CyAccession: S29659; S18782; S18784; S18785; S18791; S18797; S18800

A; Start codon: TTG
C; Function: cDD.>
A; Description: as DNA-directed DNA polymerase, catalyzes the polymerization of DNA at th
C; Function: cEN1>
A; Description: as DNA endonuclease PI-MjaI, catalyzes the hydrolysis of internal phospha
C; Function: cEN2>
A; Description: as DNA endonuclease PI-MjaI, catalyzes the hydrolysis of internal phospha
C; Function: cEN2>
A; Description: as DNA endonuclease PI-MjaI, catalyzes the hydrolysis of internal phospha
C; Stoperfamily: DNA-directed DNA polymerase (NO)
C; KGywords: endonuclease; hydrolase; nucleotidyltransferase; protein splicing

Staphyloco penicillin-binding protein mecA, low-affinity - Staphylococcus epidermidis
Denicillin-binding protein 2,
Dipaternate names: penicillin-binding protein 2,
C;Species: Staphylococcus epidermidis
C;Species: Staphylococcus epidermidis
C;Accession: JQ0774
S;Nyffel: 12-Feb-1993 #sequence\_revision 12-Feb-1993 #text\_change 26-May-2000
C;Accession: JQ0774
Gene 94, 137-138, 1990

Struct. Biol. 2:680-686(1995).
-!- FUNCTION: Staphylococcal enterotoxins cause the intoxication staphylococcal food poisoning syndrome. The illness characterized by high fever, hypotension, diarrhea, shock, and in some cases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        COFACTOR: Binds 1 zinc ion per subunit. The zinc ion is necessary for the toxin interaction with MHC class II (By similarity). SUBCELLULAR LOCATION: Secreted. SUBCELLULAR LOCATION: Secreted similarity: Belongs to the staphylococcal/streptococcal toxin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | Remain | R
